

# PVC Insulated Power & Control Cables

(600 / 1000V)

## Foreword

This catalogue contains the dimensions, electrical properties and installation data on PVC insulated power cables according to British Standards, 63-46 and IET wiring regulation Seventeenth Edition: 2008+A1:2010.

ACL Cables PLC is proud to establish a relationship with you and we are offering you a reliability of over five decades of cable manufacturing since 1962, coupled with the developing technological efficiency of electric cables. We have ventured as far Europe, Africa, Asia to New Zealand and Australia since 1989 with PVC and our journey of Innovation will continue.

We would also express our sincere thanks to our customers and well wishes who had already established a mutually beneficial relationship. We hope this catalogue to be of good aid and use.

**ACL CABLES PLC**  
2016 June  
(Fifth Edition)

## Certificates of Excellence

**ISO 9001 : 2008**

**ISO 14001 : 2004**

## Awards of Excellence

Taiki Akimoto  
5s Merit  
Award  
2007

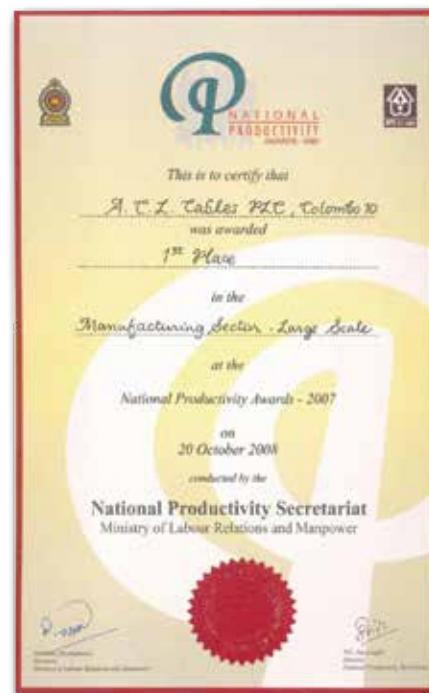

Industrial  
Excellence Award  
In Extra Large  
Manufacturing  
Category  
2007

Highest Sri Lanka Award for Quality

National Quality Award  
Large Manufacturing  
Category  
2007

Highest Sri Lanka Award for Productivity

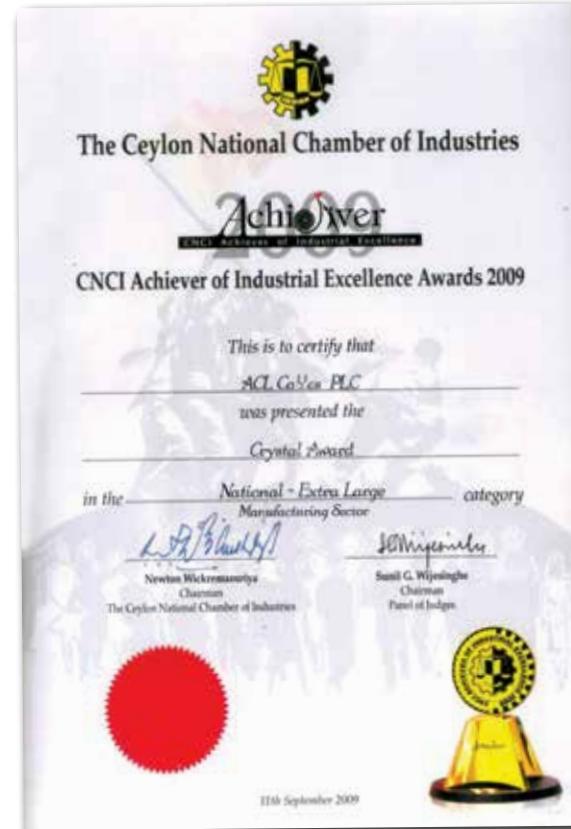

National Productivity Award  
Large Manufacturing Sector  
2007

Winner of World Class Award or the Highest Award of International Asia Pacific Quality Organization in 2008

Beating National Quality Award Winners of 46 Countries in the Asia Pacific Region which included countries such as Japan, Australia, Mexico, Singapore, India, Korea Taiwan etc.

Industrial Excellence Crystal Award  
Extra Large Manufacturing Category  
-2009

Award for Excellence Performance in Material Efficiency  
Manufacturing Large Category  
2013

National Cleaner Production Award  
Large Category  
2013

B2B Brand of the year at SLIM Brand Excellence  
2015

Global Commerce Excellence Export Award 2014  
Awarded by Shippers Academy in Association with  
Central Bank of Sri Lanka

In recognition of export and technological leadership created by  
ACL Cables PLC, which has significantly contributed to the growth  
of National Economy.

## ACL Since 1962

ACL is the largest manufacturer of cables in Sri Lanka having pioneered the industry in 1962. ACL holds 45% share of the local market and produce the widest range of cables in Sri Lanka. Today, ACL has grown to be a Group of companies holding 70% share of the cable market in Sri Lanka.

ACL is the most sought after brand of cables in Sri Lanka, having supplied 80% of the requirements of Duty Free projects owned by overseas investors and approved by the Board of Investment, beating foreign supplies of cables. All leading factories, hotels, commercial buildings and warehouses have used ACL Cables.

ACL continues to innovate and lead the field in the introduction of new products modern technology and machinery. In the five decades of its existence, the Company has evolved as a specialized manufacturer and supplier of the widest range of quality cables and conductors in the country, while possessing the **most advanced technology in the Asian region** for the manufacture of low voltage Cross Linked Polyethylene cables (XLPE).

## Concept at ACL

Modern industries and technologies have opened forth a wide range of endeavors and ventures in the Island of Sri Lanka. ACL ushered a new era in power sector and dedicated itself to the cause of transmission, distribution and utilization of electrical energy for all cross sections of the country. With a rich heritage of over five decades, ACL offers its products, which not only meet the stipulated requirements of the governing National and International specifications, but far exceeding them.

Excellence through Total Quality Management is the catchword at ACL. Since its inception ACL has striven not only to upgrade the product quality but to bring into practice superior management of men to make its place in the international market. Professionalism, advanced know how and technology, customer services have been the hallmark of ACL. Its concept is translated into every length of product through co ordinated efforts of professionals on job.

## ACL Technology

From the inception ACL has been acquiring foreign technology for the development of existing and new products. In the year 1962, ACL commenced business with technical assistance arranged through the Colombo based liaison office of Mitsui. The Japanese Technology, Machinery, & Engineers helped ACL to establish a Foundation of Quality products. Thereafter, ACL joined hands with two cable companies in India to establish the manufacture of Aluminum Conductors and Armored Cables.

One of the companys most notable technology transfer agreements in recent times have been with NOKIA Cables of Finland for the manufacture of XLPE insulated Cables, Aerial Bundled Cables and Aluminum Alloy Conductors.

Having obtained technology from NOKIA on two occasions in the year 1989 and 1993, ACL upgraded its technology on XLPE insulated Aerial Bundled Cables to surpass National French Standard NFC 33 209 in the year 1998 through its own Research and Development. This I a feat not matched in the region by any other manufacturer at that time. The technology so achieved is employed in the manufacture of XLPE insulated Armoured and Unarmoured power cables. These developments offer many benefits to valued customers and in order to highlight those benefits it was decided to name all our XPLE insulated cables under the brand name **Power X**.

Having obtained ISO 9002 certification in the year 1998, ACL was awarded the prestigious ISO 9001 2000 certificate in the Year 2002. In the same year ACL was awarded ISO 14001 : 1997 Environmental Management Systems Certification.

## ACL - TECHNOLOGICAL DEVELOPMENT

- 1962 - Establishment of ACL with technical assistance from Mitsui of Japan.
- 1978 - Introduction of Wire Drawing facility.
- 1981 - Acquisition of Technology from Alind of India for drawing and processing of Aluminium Conductors to jointly manufacture and supply 1400 MT of AAC-Fly Conductor to Ceylon Electricity Board.
- 1985 - Manufacture of Armoured Power and Control Cables for the first time in Sri Lanka with Indian Technical assistance.
- 1989 - Acquisition of Technology from NOKIA of Finland to jointly manufacture XLPE insulated Aerial Bundled Cables to execute an order for 800 km of that product on an ADB funded tender floated by Lanka Electricity Company.
- 1993 - Acquisition of Technology from NOKIA of Finland to draw and age Aluminium Alloy and establishment of aging furnace.
- 1993 - Establishment of ACL Plastics Limited for the manufacture of our own PVC Compound.
- 1994 - Pilot Project for 11kV partially insulated conductors working with Ceylon Electricity Board.
- 1998 - Successfully upgraded XLPE Extrusion Technology to National French Standard NFC 33-209 and won 500 km order for Aerial Bundled Cables from Ceylon Electricity Board.

- 2005 - Introduction of Flame Retardant (FR), Flame Retardant Low Smoke (FRLS) and Low Smoke Halogen Free (LSHF) cables with technical assistance from a British Company.
- 2007 - Setting up of Aluminium Rod Plant with a total capacity of 24000 Metric Tons per annum.
- 2010 - Re - launch of 11 kV & 33 kV ACL SAX as per new specifications of CEB with the second pilot project.
- 2013 - Manufacture of Fire Survival cables to maintain circuit integrity under fire conditions in accordance with BS 6387:1994, for the first time in Sri Lanka.

## ACL - CORPORATE HIGHLIGHTS

- 1962 - Commencement as a member of Associated Motorways Group (AMW) of Companies under the name Associated Cables Ltd.
- 1976 - Converted to a Public Limited Liability Company.
- 1978 - Moved out of AMW Group.
- 1982 - Establishment of own island wide distribution network.
- 1990 - Change of Company name in to ACL Cables Limited
- 1991 - Establishment of ACL Plastics Limited
- 1995 - Acquisition of Ceylon Bulbs and Electricals Limited.
- 1999 - Purchase of 75% of shares of the second largest cable manufacturer in the Island.
- 2002 - Setting up of state of the art Magnet Wire project.
- 2007 - Establishment of ACL Metals & Alloys (PVT)Ltd.
- 2011 - Setting up of Copper Plant
- 2011 - Shifting of ACL Head Office to newly constructed four storied own building at Colombo 08.
- 2013 - Establishment of ACL Electric PVT (Ltd) for manufacture of switches

## OTHER ACHIEVEMENTS OF ACL

- 1995 - **Commencement of Export of Cables**  
In August 1995 US\$ 269,650/- worth of Alloy Conductors were exported to Rural Electrification Board, Bangladesh. In November 1995 US\$ 117,609/- worth of Armoured Cables were exported to Maldives Electricity Board, Maldives.
- 1998 - **Achievement of ISO 9002:1994 Quality Management System Certificate**  
Achieved prestigious ISO 9002:1994 Quality Management System Certificate.
- 2002 - **Achievement of ISO 9001: 2000 Quality Management System Certificate**  
Achieved prestigious ISO 901:2000 Quality Management System certificate.
- 2002 - **Introduction of ACL FLEXI cables to the Sri Lanka market.**  
Introduced a series of domestic wires with super flexibility in the range of 1.0mm<sup>2</sup> - 6mm<sup>2</sup>.
- 2002 - **Achievement of ISO 14001:1997 Environmental Management System Certificate**  
Achieved prestigious ISO 14001:1997 Environmental Management System Certificate.
- 2004 - Large scale export of Aerial Bundled Cables to India.
- 2004 - Achievement of IS 694 Product Certificate from Bureau of Indian Standards.
- 2007 - Taiki Akimoto 5 S Merit Award.
- 2007/2008 - Industrial Excellence Gold Award in Extra Large Manufacturing category.
- 2007 - National Quality Award - Large Scale Manufacturing category (highest award for Quality in Sri Lanka).
- 2007 - National Productivity Award - Large Scale Manufacturing category (highest award for Productivity in Sri Lanka).
- 2008 - Highest Award of Asia Pacific Quality Organization called the World Class Award (A record to date among all Sri Lankan manufacturers).
- 2008 - Commencement of Export of cable to Australia.
- 2009 - Industrial Excellence Crystal Award in Extra Large Manufacturing category.
- 2011 - Commencement of Export of cable to New Zealand.
- 2013 - National Cleaner Production Award in recognition of Excellence in Resource Efficient & Production Practices in Manufacturing Large Category.
- 2013 - Special Award for Excellence Performance in Material Efficiency in Manufacturing Large Category.
- 2015 - B2B Brand of the Year - Gold. At Slim Brand Excellence 2015.

## "ACL" - PRODUCTS

### BARE CONDUCTORS

All Aluminium Conductors (AAC)

All Aluminium Alloy Conductors (AAAC)

Aluminium Conductors Steel Reinforced (ACSR/GZ ,ACSR/AC) to BS, ASTM, CSA and DIN, Standards. Sizes up to 750mm<sup>2</sup>

For low, medium and high voltage electricity, transmission and distribution.

\* BS 215 Part 1, BS 215 Part 2, BSEN 50183, SLS 750 Part 1, SLS 750 Part 2, IS 398 Part 1, IS 398 Part 4

Traditional Bare Conductors are prone to failure due to vegetation. A superior alternative to Bare Conductors are Fully Insulated Cables (Underground or aerial) but those are prohibitively expensive for country wide usage. Therefore, ACL has developed a range of Partially Insulated Conductors (Covered Conductors) branded as ACLSAX V which is relatively in-expensive. The extensive Research & Development done by ACL, has made ACLSAX-V, not only to meet BSEN 50397-1:2006, but to surpasses it. In addition, ACL joins hands with ENSTO of Finland to supply their Fittings along with ACLSAX-V Conductors since it is absolutely essential to use (a) Correct Conductors, (b) Correct Fittings and (c) Correct installation Techniques as specified by the 3 separate British standards covering Partially Insulated Conductors. Without such rigorous adherence to Standards, Partially Insulated Conductors may fail to deliver optimum results as we have seen in some parts of the world. Therefore, ACL promotes ACLSAX-V as a Complete System.

The three BS standards are

\* BSEN 50397-1:2006, BSEN 50397-2 :2009 & BSEN 50397-3:2010

### "ACL SAX " COVERED CONDUCTORS (CC)

This is an area where ACL lead the Asian region and remain second to none in the World. Partially Insulated Conductors or Covered Conductors are used for medium voltage distribution of electricity by Power Distribution companies to improve Reliability and Safety.

### HOUSE/BUILDING WIRES

Cu/PVC and Cu/PVC/PVC cables to BS, SLS, IS & IEC Standards in 300/500V, 450/750V, 1100V and 600/1000V sizes 1mm<sup>2</sup> to 1000mm<sup>2</sup>

Single core upto 1000mm<sup>2</sup>

3 or 3 1/2 core upto 400mm<sup>2</sup>

Cu/PVC Green Earth Wire

2 Core up to 70mm<sup>2</sup>

4 core up to 400mm<sup>2</sup>

For wiring of houses/commercial buildings and distribution of electricity within factories.

BS 6004, BS 6346, SLS 733, SLS 987, IS 694, IS 1554, IEC 60502

These total range is now available in fire retardant, low smoke, halogen free properties.

## ARMoured & UNARMoured POWER CABLES

To BS, IEC, SLS Standards 600/1000V & IS 1100V -Cu or Al, PVC insulated and Cu or Al, XLPE insulated

Power cables single core up to 1000mm<sup>2</sup>

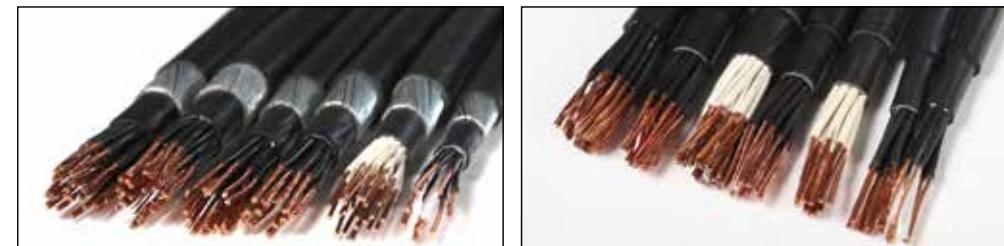

2 Core up to 400 mm<sup>2</sup> 3 or 3 1/2 Core upto 400mm<sup>2</sup>

4 Core up to 400 mm<sup>2</sup> 5 Core up to 50mm<sup>2</sup>

For distribution of electricity within cities, factories and buildings.

\* BS 6346, BS 5467, SLS 1186, IS 1554, IEC 60502

## CONTROL CABLES

Cu/PVC Control Cables sizes 1.5mm<sup>2</sup>, 2.5mm<sup>2</sup>, and 4mm<sup>2</sup>. Number of cores range from 5 to 48 cores and conform to BS 6346,600/1000 V and IS 1554 1100V. Can be armoured or unarmoured and either screened or unscreened.

\* BS 6346, IS 1554

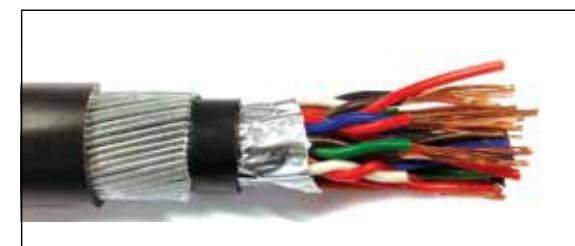

## XLPE INSULATED AERIAL BUNDLED CABLES (ABC)

To NFC 33-209, 600/1000V and IS 14255, 1100V Size 16mm<sup>2</sup>, 25mm<sup>2</sup>, 35mm<sup>2</sup>, 50mm<sup>2</sup>, 70mm<sup>2</sup>, 95mm<sup>2</sup>, 120mm<sup>2</sup>, (2 core, 4 core, 5 core and 6 core) for rural and semi-urban low voltage distribution of electricity.

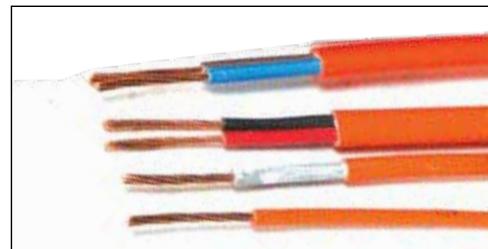

\* NFC 33-209, IS 14255

## INSTRUMENTATION CABLES

Multicore, screened instrument cables, conductor of annealed solid/stranded/flexible copper/tinned copper, insulated with PVC/PE, twisted pair/triode/quad, screened with mylar aluminium and provided with copper drainwire, laid up circular, overall screened and finally sheathed with PVC/PE for data and signal transmission without external interference.

## ACL Fire Retardant Cables FR, FRLS & LSHF

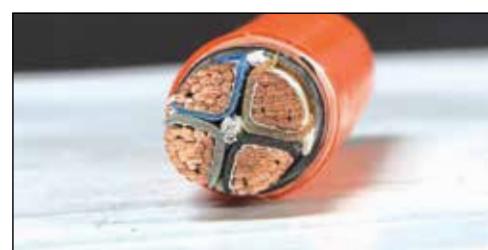

ACL FIRE RETARDANT Cables are to be used in any building in lieu of traditional PVC insulated Cables which spread a fire easily. The main function of Fire Retardant Cables is to prevent spread of fire originated probably due to an electrical short circuit.

ACL has 3 different grades of Fire Retardant Cables. 1. ACL FIREGUARD (FR), 2. Fire Retardant Low Smoke (FRLS) both made of modified PVC. Third variety is ACL FIREZERO (LSHF) which unlike the other two, is completely free of PVC and is the highest grade of Fire Retardant Cable manufactured and recommended by ACL. Since All FIREZERO is free of PVC, it emits negligible amounts of Acidic gasses and Smoke even if it is caught in a fire. These Cables conform to following standards -

\* ASTM D2863 :2013 ,IEC 60332-1:2004 ,IEC 60754-1:2011, IEC 61034-2 :2005 & IEC 60754-2:1997

## ACL Fire Resistant Cables ACL FIRESURVIVOR

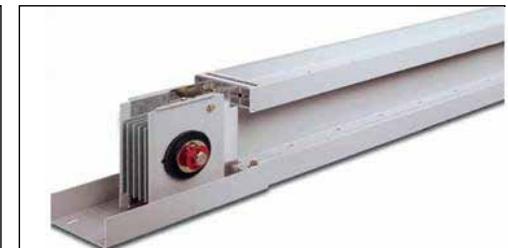

These cables are needed to supply electricity to circuits which become critically important in the midst of a Fire. In a building caught on fire, Electrical circuits providing electricity to Fire Alarms, Escape Lights, Exhaust Fans, Sprinklers, Lifts etc. become critically important not only to extinguish the fire but also to help in evacuation of people.

Cables for those equipment should be wired with ACL FIRESURVIVOR Cables which can provide uninterrupted electricity (circuit integrity) in the midst of a fire having a temperature of 950 deg centigrade for 3 hours. These Cables conform to the following standards -

- \* BS 6387:2013 & IEC 60331-21 :1999-04
- \* CWZ - PLWRI

## COPPER BUS BARS AND BUS BAR DUCT SYSTEMS

Bus bar systems refers to conductors that take the form of a bar or bars of copper conductor. The bars may be exposed or enclosed. Bus bars are used within electrical installations for distributing power from a supply point to a number of output circuits. They may be used in a variety of configurations ranging from vertical risers, carrying current to each floor of a multi-storey building, to bars used entirely within a distribution panel or within an industrial process related switchboard, distribution board , substation panels and ,battery banks, ect .

These bus bars or bus bar duct systems may have one or more joints to assure proper length and configuration and one or more take-off points connected to end-use equipment.

it is necessary to use more expensive grade of high conductivity copper which is specially produced for this purpose. This type of copper, known as oxygen-free high conductivity copper, is normally produced by melting and casting under a protective atmosphere. The result is a high purity copper containing 99.95% copper. In additionally, these products are fully type tested to the standard of. IEC 60439-2 & 3

## ACL Facilities

State of the art manufacturing facilities and testing equipment from leaders of Europe, ensure highest standards of products.

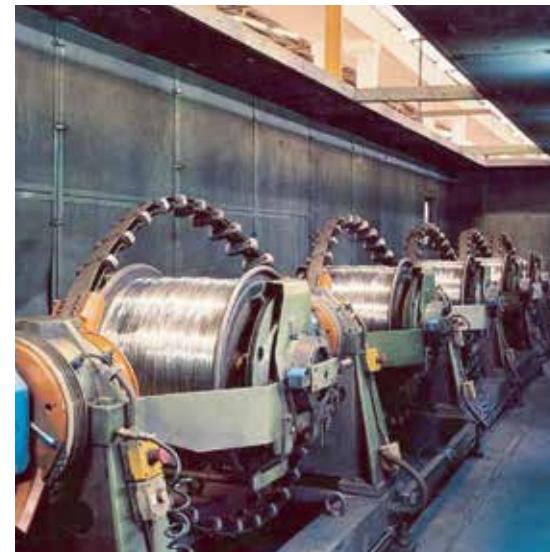

12 channel copper upward casting induction furnace for the manufacture of 8mm diameter oxygen free copper rods .

Aluminium melting furnace and rod mill for the manufacturing of 9.5mm diameter Aluminum and Aluminum Alloy Rods.

Annealed Copper without dust being drawn at 30m/sec on 15 draft angular shaft.  
Separate motor driven Sictra rod break down machine

Seven Strand Aluminium conductor is being stranded on 1400 rpm 630 DIN bobbin  
Skip Strander at 150m/min

Batch loading of Copper wires in 630 DIN Spools on 61 strand high speed  
Tandem Strander.

Extrusion of outer sheath of  $4 \times 400\text{mm}^2$  at the rate of 800kg of PVC per  
hour on an 120mm Extruder.

Assembly of an Aerial Bundled Cable on a Bow strander machine at 180m/min

Drum Twister Machine for the assembly and armouring of Power Cables

Heavy duty, high boddin weight, Planetary Strander line for assembling of  
LA / MV Aerial Bundled Cables

Centralized warehouse for live inventory management

## QUALITY ASSURANCE DEPARTMENT

### Testing facilities

Electronic Tensile Tester - To Obtain tensile strength & elongation values of Power - X Cables up to 4 x 400 mm<sup>2</sup>.

High precision automatic Resistive Bridge used for the measurement of electrical resistance of Power - X Cables up to 1000 mm<sup>2</sup>

Oxygen index and temperature index tester for the testing of fire retardant properties of low smoke halogen free power cables.

Testing of vertical flame spread of vertically mounted bunched wires or cables .

Testing of vertical flame spread of low smoke halogen free power cables.

Measuring of the vertical flame propagation of low smoke halogen free power cables.

**Profile Projector & Digimatic mini Processor -**  
To obtain accurate measurement of thickness of  
insulated cores of Power - X Cables.

1 Core Armoured Cables - Cu / PVC / AWA / PVC

## Schedule of installation methods of cables for determining current carrying capacity.

Installation Method		Reference method to be used to determine current carrying capacity
Examples	Description	
	Room Side 1 Non-sheathed cables in conduit in a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
	Room Side 2 Multi core cables in conduit in a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
	Room Side 3 Multi core cables direct in a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
	4 Non-sheathed cables in conduit on a wooden or masonry wall <sup>c</sup>	B
	5 Multi core cable in conduit on a wooden or masonry wall <sup>c</sup>	B
	6 Non-sheathed cables in cable trunking on a wooden or masonry wall. run horizontally (left) <sup>b</sup> run vertically (Right) <sup>b,c</sup>	B

 7	Multi core cable in cable trunking on a wooden or masonry wall run horizontally (left) <sup>b</sup> run vertically (Right) <sup>b,c</sup>	<b>B*</b>
 8	Single core or multi core cables: Fixed on (clipped direct), or spaced less than $0.3 \times$ cable diameter from a wooden or masonry wall. <sup>c</sup>	<b>C</b>
 9	Single-core or multi core cables: Fixed directly under a wooden or masonry ceiling.	<b>C</b>
 10	Single-core or multi core cables: on unperforated tray run horizontally or vertically <sup>c</sup>  De = the external diameter of a cable.  The space between wall and cable tray will be, $2.2 \times De$ ; When 3 single core cables are bound in trefoil, $3.0 \times De$ ; When 3 single core cables are laid in flat .	<b>C</b>
 11	Single-core or multi core cables: On perforated tray Run horizontally or vertically <sup>c</sup>  The space between wall and cable tray will be, $2.2 \times De$ ; When 3 single core cables are bound in trefoil, $3.0 \times De$ ; When 3 single core cables are laid in flat formation.	<b>D</b>

 12	<p>Single core or multi core cables: on ladder bracket type tray or on a wire mesh tray run horizontally or vertically<sup>c</sup></p> <p>The space between wall and cable tray will be , <math>2.2 \times D_e</math> ; When 3 single core cables are bound in trefoil , <math>3.0 \times D_e</math> ; When 3 single core cables are laid in flat formation.</p>	<b>D</b>
 13	<p>Multi core armoured cable in conduit or in cable ducting in the ground</p>	<b>E</b> <b>for multi core armoured cable only.</b>
 14	<p>Sheathed, armoured or multi core cables direct in the ground: without added mechanical protection.</p>	<b>E</b>
 15	<p>Sheathed, armoured or multi core cables direct in the ground: with added mechanical protection (e.g. Concrete cover)</p>	<b>E</b>

- b –Values given for Installation Methods are for a single circuit. Where there is more than one circuit in the trunking the group rating factor given in Adjustment Table -7 is applicable, irrespective of the presence of an internal barrier or partition.
- c- Care is needed where the cable runs vertically and ventilation is restricted The ambient temperature at the top of the vertical section can be much higher.
- The inclusion of directly buried cables is satisfactory where the soil thermal resistivity is of the order of  $2.5 \text{K.m/W}$ . For lower soil resistivities, the current-carrying capacity for directly buried cables is appreciably higher than for cables in ducts.
- \* Still under consideration in IEC.

## VARIATION IN AMBIENT TEMPERATURE

## ADJUSTMENT TABLE -1

*Correction factors for ambient temperature where protection is against short -circuit*

Type of Insulation	Operating Temperature	AMBIENT TEMPERATURE (°C)							
		25	30	35	40	45	50	55	60
Thermoplastic ( PVC)	70°C	1.03	1	0.94	0.87	0.79	0.71	0.61	0.5

## VARIATION IN GROUND TEMPERATURE

## ADJUSTMENT TABLE - 2

Insulation & Conductor Temperature (°C)	GROUND TEMPERATURE (°C)										
	10	15	20	25	30	35	40	45	50	55	60
PVC - 70	1.1	1.05	1	0.95	0.89	0.84	0.77	0.71	0.63	0.55	0.45

### ADJUSTMENT TABLE - 3

#### VARIATION IN SOIL THERMAL RESISTIVITY

Rating factors for cables buried direct in the ground or in an underground conduit system to BS EN 50086-2-4 for soil thermal resistivities other than 2.5K.m/W to be applied to the current carrying capacities for reference method E

Thermal resistivity, K.m/W	0.5	0.8	1	1.2	1.5	2	2.5	3
Rating factor for cables in buried ducts	1.28	1.2	1.18	1.13	1.1	1.05	1	0.96
Rating factor for direct buried cables	1.88	1.62	1.5	1.4	1.28	1.12	1	0.9

**NOTE 1:** The rating factors given have been averaged over the range of conductor sizes and types of installation included in the relevant tables in this appendix. The overall accuracy of rating factors is within  $\pm 5\%$ .

**NOTE 2:** Where more precise values are required they may be calculated by methods given in BS7769 (BS IEC 60287)

**NOTE 3:** The rating factors are applicable to ducts buried at depths of up to 0.8 m.

### ADJUSTMENT TABLE - 4

Rating factors of depth of burial for depths of laying other than 0.7 m for direct buried cables and cables in buried ducts

Depth of laying, m	Buried direct	In buried ducts
0.50	1.03	1.02
0.70	1.00	1
1	0.97	0.98
1.25	0.95	0.96
1.50	0.94	0.95
1.75	0.93	0.94
2	0.92	0.93
2.5	0.90	0.92
3	0.89	0.91

## ADJUSTMENT TABLE - 5

Rating factors for more than one circuit, cables buried directly in the ground

Number of circuits	Cable-to-cable clearance (a)				
	Nil (cables touching)	One cable diameter	0.125 m	0.25 m	0.5 m
2	0.75	0.8	0.85	0.9	0.9
3	0.65	0.7	0.75	0.8	0.85
4	0.6	0.6	0.7	0.75	0.8
5	0.55	0.55	0.65	0.7	0.8
6	0.5	0.55	0.6	0.7	0.8

Multicore Cables

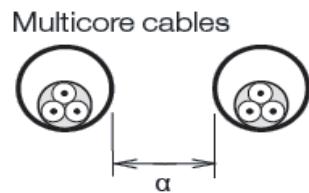

**NOTE 1:** Values given apply to an installation depth of 0.7 in and a soil thermal resistivity of 2.5 K.m/W.

**NOTE 2:** In case of a thermal resistivity lower than 2.5 K.m/W the rating factors can, in general be increased and can be calculated by the methods given in BS 7769 (BS IEC 60287).

## ADJUSTMENT TABLE - 6

Rating factors for more than one circuit, cables in ducts buried in the ground

Number of cables	Duct-to-duct clearance (a)			
	Nil (ducts touching)	0.25 in	0.5 m	1.0 m
2	0.85	0.9	0.95	0.95
3	0.75	0.85	0.9	0.95
4	0.7	0.8	0.85	0.9
5	0.65	0.8	0.85	0.9
6	0.6	0.8	0.8	0.9

**NOTE 1:** Values given apply to an installation depth of 0.7 m and a soil thermal resistivity of 2.5 K..m/W.

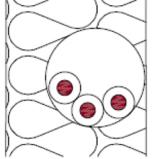

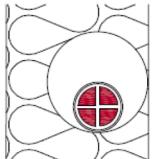

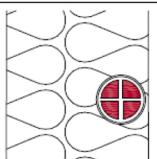

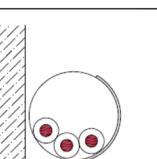

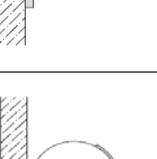

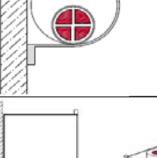

**NOTE 2:** In case of a thermal resistivity lower than 2.5 K.m/W the rating factors can, in general, be increased and can be calculated by the methods given in BS 7769 (BS I EC 60287).

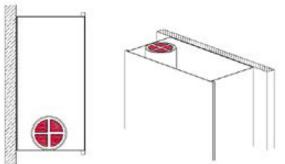

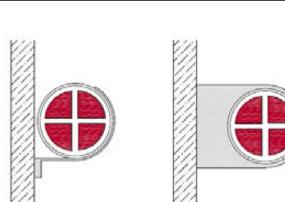

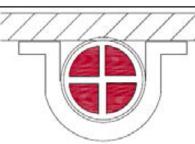

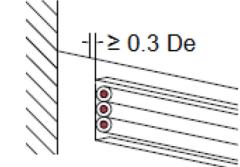

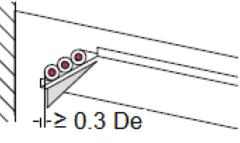

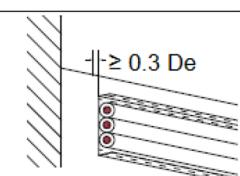

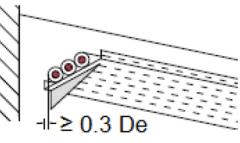

## ADJUSTMENT TABLE - 7

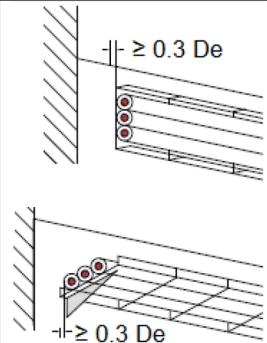

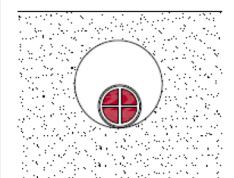

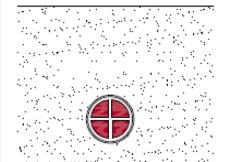

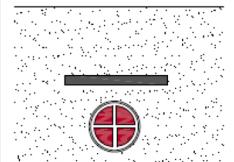

**Rating factors for one circuit or one multicore cable or for a group of circuits, or a group of multicore cables**

Arrangement (cables touching)	Number of circuits or multicore cables											
	1	2	3	4	5	6	7	8	9	12	16	20
Bunched in air, on a surface, embedded or enclosed	1	0.8	0.7	0.65	0.6	0.57	0.54	0.52	0.5	0.45	0.41	0.38
Single layer on wall or floor	1	0.85	0.79	0.75	0.73	0.72	0.72	0.71	0.7	0.7	0.7	0.7
Single layer mullicore on a perforated horizontal or vertical cable tray system	1	0.88	0.82	0.77	0.75	0.73	0.73	0.72	0.72	0.72	0.72	0.72
Single layer multi core on cable ladder system or cleats etc..	1	0.87	0.82	0.8	0.8	0.79	0.79	0.78	0.78	0.78	0.78	0.78

## Schedule of installation methods of cables for determining current carrying capacity.

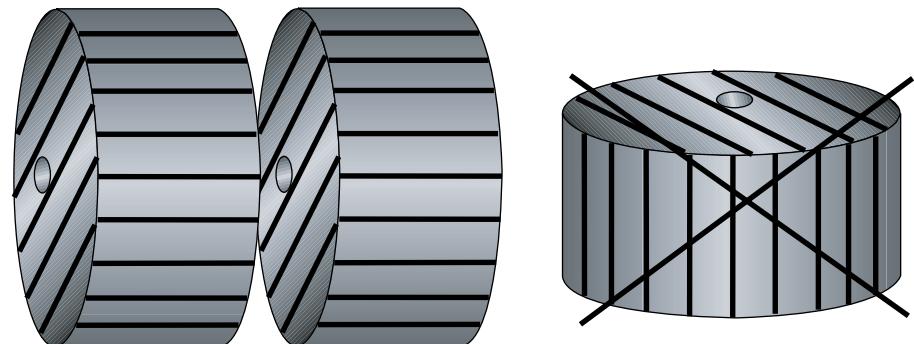

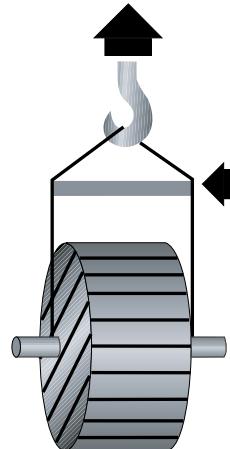

Installation Method		Reference method to be used to determine current carrying capacity
Examples	Description	
 1	Room Side Non-sheathed cables in conduit In a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
 2	Room Side Multi core cables in conduit In a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
 3	Room Side Multi core cables direct in a thermally insulated wall with an inner skin having a thermal conductance of not less than $10 \text{ W/m}^2\text{K}^c$	A
 4	Non-sheathed cables in conduit on a wooden or masonry wall <sup>c</sup>	B
 5	Multi core cable in conduit on a wooden or masonry wall <sup>c</sup>	B
 6	Non-sheathed cables in cable trunking on a wooden or masonry wall. run horizontally (left) <sup>b</sup> run vertically (Right) <sup>b,c</sup>	B

 7	<p>Multi core cable in cable trunking on a wooden or masonry wall run horizontally (left)<sup>b</sup> run vertically (Right)<sup>b,c</sup></p>	<b>B*</b>
 8	<p>Single core or multi core cables: Fixed on (clipped direct), or spaced less than <math>0.3 \times</math> cable diameter from a wooden or masonry wall.<sup>c</sup></p>	<b>C</b>
 9	<p>Single-core or multi core cables: Fixed directly under a wooden or masonry ceiling.</p>	<b>C</b>
   10	<p>Single-core or multi core cables: on unperforated tray run horizontally or vertically<sup>c</sup></p> <p><math>De</math> = the external diameter of a cable.</p> <p>The space between wall and cable tray will be ,  <math>2.2 \times De</math> ; When 3 single core cables are bound in trefoil ,  <math>3.0 \times De</math> ; When 3 single core cables are laid in flat .</p>	<b>C</b>
   11	<p>Single-core or multi core cables: On perforated tray Run horizontally or vertically<sup>c</sup></p> <p>The space between wall and cable tray will be ,  <math>2.2 \times De</math> ; When 3 single core cables are bound in trefoil ,  <math>3.0 \times De</math> ; When 3 single core cables are laid in flat formation.</p>	<b>D</b>

 <p>12</p>	<p>Single core or multi core cables: on ladder bracket type tray or on a wire mesh tray run horizontally or vertically <sup>c</sup></p> <p>The space between wall and cable tray will be , <math>2.2 \times D_e</math> ; When 3 single core cables are bound in trefoil , <math>3.0 \times D_e</math> ; When 3 single core cables are laid in flat formation.</p>	<p><b>D</b></p>
 <p>13</p>	<p>Multi core armoured cable in conduit or in cable ducting in the ground</p>	<p><b>E</b> <b>for multi core armoured cable only.</b></p>
 <p>14</p>	<p>Sheathed, armoured or multi core cables direct in the ground: without added mechanical protection.</p>	<p><b>E</b></p>
 <p>15</p>	<p>Sheathed, armoured or multi core cables direct in the ground: with added mechanical protection (e.g. Concrete cover)</p>	<p><b>E</b></p>

- b –Values given for Installation Methods are for a single circuit. Where there is more than one circuit in the trunking the group rating factor given in Adjustment Table -7 is applicable, irrespective of the presence of an internal barrier or partition.
- c- Care is needed where the cable runs vertically and ventilation is restricted The ambient temperature at the top of the vertical section can be much higher.
- The inclusion of directly buried cables is satisfactory where the soil thermal resistivity is of the order of  $2.5 \text{K.m/W}$ . For lower soil resistivities, the current-carrying capacity for directly buried cables is appreciably higher than for cables in ducts.
- \* Still under consideration in IEC.

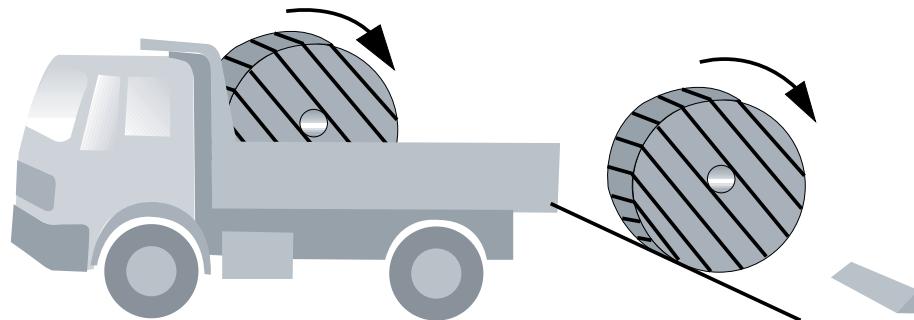

## HANDLING INSTRUCTIONS FOR ACL CABLES DRUMS

**Storage Position**

**Move by Crane or Fork Lift**

**Transport direction Do not drop**

- F - Flange Diameter
- B - Barrel Diameter
- T - Inner Traverse
- t - Thickness of Flange
- h - Spindle Hole Diameter

Note : t = 76.2 mm & h = 95 mm for all above drums except for D 1 which t= 51 mm. H= 90mm..
